Dr. Onufer has 20 years of experience in Clinical Cardiovascular Electrophysiology. He has performed more than 2,000 catheter ablation procedures and implanted over 3,000 pacemakers and implantable cardioverter defibrillators. Dr. Onufer has been the principal investigator in numerous industry and NIH sponsored studies to promote the development of innovative therapies for heart rhythm disorders. He provides a full complement of services at VCS – from comprehensive evaluations of heart rhythm disorders to complex treatments for atrial fibrillation and ventricular tachycardia.

Dr. Joyner has over 9 years experience in Clinical Cardiovascular Electrophysiology. He provides a full range of diagnostic and treatment options to identify and treat heart rhythm issues– from common syncope to complex arrhythmias and atrial fibrillation. Dr. Joyner is skilled at device therapies, ablations, and other methods to prevent the burden of a-fib, such as the Convergent Maze procedure.

Dr. Schneider joined VCS in 2008 from George Washington University. He is triple boarded in Cardiac Electrophysiology, Cardiovascular Disease and Internal Medicine. He provides a full range of diagnostic and treatment options to identify and treat heart rhythm issues – from common syncope to complex arrhythmias and atrial fibrillation. Dr. Schneider is skilled at device therapies, ablations, and other methods to prevent the burden of a-fib.
